PROJECT OVERWIEW:

This project focuses on importing data from spreadsheet files into a target system using data transform maps. It helps map spreadsheet columns to the

correct destination fields and transform data into the required format. This process reduces manual data entry, improves data accuracy, and makes data importing easier and more efficient.

Project Purpose:

The main purpose of this project is to simplify the process of importing spreadsheet data into a system. It aims to:

Reduce manual data entry.

Map spreadsheet columns to the correct fields.

Improve data accuracy and consistency.

Identify errors through data validation.

Save time and improve data management.

Make the data import process simple and efficient.
